

LIST OF TABLES

Table	Page
2.1 Summarization techniques for accessing erosion process.....	9
3.1 Mineral compositions of samples before testing.....	37
4.1 Roundness classifications.....	44
4.2 Sphericity classifications.....	44
5.1 Mean roundness, sphericity, and average sizes with standard deviation for PWSS, PPCS and PPSS specimens under dry and wet tests.....	51
5.2 Mineral compositions in terms of weight percent (W_i) for retained fragments before testing and after 80 test cycles.....	55
5.3 Mineral compositions in terms of volumatic percent (V_i) for retained fragments before testing and after 80 test cycles.....	56
5.4 Mineral compositions in terms of weight percent (V_i) for passing material after test cycle 40 and 80.....	59
5.5 Densities for PWSS, PPCS and PPSS specimens before testing and after test cycle 20, 40, 60, and 80.....	60
6.1 Normalized fragment sizes for PWSS, PPCS and PPSS specimens before testing and after test cycle 20, 40, 60, and 80.....	63
6.2 Calculated porosities (n_c) and porosities (n) for PWSS, PPCS and PPSS specimens before testing and after testing through 80 cycles. The n_c is measured with an interval of 20 test cycles.....	66
6.3 Test cycle (N) required to obtain 100% passing materials.....	71

LIST OF TABLES (continued)

Table	Page
7.1 Parameters of testing drum.....	75
7.2 Prediction of accumulated energy (E) and test cycle (N) required to obtain 100% passing materials with 2 mm or less.....	76
7.3 Constant parameters using in equation (7.10) through (7.12).....	78
