

Evaluation of one acharn/one product, 2002

Development of herbarium at SUT

Dr. Paul J. Grote

Introduction

A herbarium has been started in the F2 Building (F2218) with support from both SUT grants (Assoc. Prof. Onnop Wara-aswapati and Dr. Paul J. Grote, P.I.'s) and a BRT (Biodiversity Research and Training Program) grant (Dr. Paul J. Grote, P.I.). The herbarium contained plants comprising approximately 500 species. However, more plant specimens need to be collected to better represent the great diversity of plant species in Thailand and worldwide. Additionally, the specimens need to be better organized for easier access to the desired species, the computer database needs to be updated, and the herbarium sheets need to be better labeled. The objective of the present project has been to develop the herbarium to reduce the deficiencies mentioned and to make the herbarium more user-friendly.

Product indicators

- 1) The number of new plant specimens collected and the number of new herbarium sheets prepared
- 2) Updated database of the specimens, including collection information
- 3) The appearance and ease-of-use of the herbarium itself

Results

- 1) One hundred fifty six specimens, comprising 60 families, and at least 93 genera and 104 species, have been collected and added to the herbarium collection in 2002.
- 2) The database of collection information has been updated and includes information on 563 specimens, comprising at least 109 families, 251 genera, and 295 species.
- 3) The herbarium has been reorganized. Specimens are arranged in alphabetical order by family, genus, and species, respectively.

Benefits of the project

- 1) The herbarium is necessary for teaching Plant Biology Laboratory (104 104), Biodiversity of Plants (104 623), Ph. D. Thesis (104 898), and other courses including special topics and courses taught in the Institute of Agricultural Technology.
- 2) The herbarium can be used by students, staff, and outside visitors to identify plant specimens.
- 3) The herbarium is necessary for research in plant taxonomy and paleobotany.

Problems or obstacles

- 1) Some specimens could not be identified to species or even to family.
- 2) Maintaining a herbarium is an ongoing project. Additional work is required to put all of the information in the computer database, to prepare all of the specimen labels, and to sort all of the specimens.
- 3) An ongoing effort is needed to prevent insect pests from destroying the specimens. The sheets are periodically placed in a freezer to kill insect pests.

Development of Herbarium at SUT

One acharm/one product for 2002

Dr. Paul J. Grote

School of Biology, Institute of Science

4 March, 2003

The product for 2002 consists of the following:

- 1) The herbarium in Room F2218 has been reorganized. Dried plant specimens have been arranged in alphabetical order by family, genus, and species, respectively.
- 2) One hundred fifty six plant specimens, comprising 60 families, and at least 93 genera and 104 species, have been collected and added to the herbarium collections.
- 3) A database file with collection information has been updated and includes information on 563 specimens. The database was prepared as an Access 97 file and is enclosed as the ZIP file sutherbarium.zip.

Table 1 summarizes the collection data of the 563 specimens in the database file.

Table 2 presents examples of specimen labels produced by the databas file and which can be used to attach to herbarium sheets.

Suranaree University of Technology Herbarium
