

LIST OF TABLES

Table	Page
2.1 Roles of non-coding Rnas in regulating gene expression	20
3.1 Ingredients and chemical composition (g kg ⁻¹) of the commercial diets (diets during nursing) and for stimulus diets	50
3.2 Growth performances of juvenile offspring from Nile tilapia broodstock fed with low-carbohydrate/high-protein (LC/HP) diet and high-carbohydrate/low-protein (HC/LP) diet	51
3.3 Plasma metabolites and proximate composition of liver, muscle and whole body in juvenile offspring before (week 17) and after (week 21) challenging with HC/LP diet for 4weeks. Juvenile offspring were obtained from broodstock fed with low-carbohydrate/high-protein (LC/HP) diet and high-carbohydrate/low-protein (HC/LP) diets	52
3.4 mRNA levels of genes related to carbohydrate and its related metabolism inthe liver and muscle of juvenile offspring before (week 17) and after (week 21) challenging with HC/LP diet for 4weeks. Juvenile offspring were obtained from broodstock fed with low-carbohydrate/high-protein (LC/HP) diet and high-carbohydrate/low-protein (HC/LP) diets.....	53
3.5 mRNA levels of genes related to DNA methylation in the liver and muscle of juvenile offspring before (week 17) and after (week 21) challenging with HC/LP diet for 4weeks. Juvenile offspring were obtained from broodstock fed with low-carbohydrate/high-protein (LC/HP) diet and high-carbohydrate/ low-protein (HC/LP) diets.....	54
3.6 mRNA levels of genes related to histone modifications in the liver and muscle of juvenile offspring before (week 17) and after (week 21) challenging with HC/LP diet for 4weeks. Juvenile offspring were obtained from broodstock fed with low-carbohydrate/high-protein (LC/HP) diet and high- carbohydrate/low-protein (HC/LP) diets	55

LIST OF TABLES (Continued)

Table	Page
3.7 List of primers used for qRT-PCR of genes related to carbohydrate and intermediary metabolism in the liver and muscle.....	56
3.8 List of primers used for qRT-PCR of genes related to epigenetic modification-related enzymes expressed in liver and muscle tissues.....	57
4.1 Ingredients and chemical compositions (%) of the challenge diets	81
4.2 Growth performances of adult offspring before (week 25) and after (week 29) fed with HC/LP diet for 4 weeks	82
4.3 Plasma metabolites in adult offspring before (week 25) and after (week 29) fed with HC/LP diet for 4 weeks.....	82
4.4 Proximate composition of liver, muscle and whole body in adult offspring before (week 25) and after (week 29) fed with HC/LP diet for 4 weeks	83
4.5 mRNA levels of genes related to intermediary CHO metabolism in the liver and muscle of adult offspring before (week 25) and after (week 29) fed with HC/LP diet for 4 weeks.....	84
4.6 mRNA levels of genes related to DNA methylation in the liver and muscle of adult offspring fed with HC/LP diet for 4 weeks (week 26-29).....	85
4.7 mRNA levels of genes related to histone modifications in the liver and muscle of adult offspring fed with HC/LP diet for 4 weeks (week 26-29).....	86
4.8 List of primers used for qRT-PCR of genes related to carbohydrate and intermediary metabolism in the liver and muscle.....	87
4.9 List of primers used for qRT-PCR of genes related to epigenetic modification-related enzymes expressed in liver and muscle tissues.....	88
5.1 Ingredients and chemical compositions (%) of the experiment diets	116
5.2 Growth performances of adult offspring fed with PBMC and PBHC diets for 4 weeks (week 57-60)	117

LIST OF TABLES (Continued)

Table	Page
5.3 Plasma metabolites in adult offspring before (week 56) and after (week 60) fed with PBMC and PBHC diets for 4 weeks	118
5.4 Proximate composition of liver, muscle and whole body in adult offspring before (week 25) and after (week 29) fed with HC/LP diet for 4 weeks	119
5.5 mRNA levels of genes related to intermediary CHO metabolism in the liver and muscle of adult offspring before (week 56) and after (week 60) fed with PBMC and PBHC diets for 4 weeks.....	120
5.6 mRNA levels of genes related to DNA methylation in the liver of adult offspring before (week 56) and after (week 60) fed with PBMC and PBHC diets for 4 weeks.....	121
5.7 mRNA levels of genes related to DNA methylation in the muscle of adult offspring before (week 56) and after (week 60) fed with PBMC and PBHC diets for 4 weeks.....	122
5.8 mRNA levels of genes related to histone modifications in the muscle of adult offspring before (week 56) and after (week 60) fed with PBMC and PBHC diets for 4 weeks.....	123
5.9 mRNA levels of genes related to histone modifications in the muscle of adult offspring before (week 56) and after (week 60) fed with PBMC and PBHC diets for 4 weeks.....	125
5.10 List of primers used for qRT-PCR of genes related to carbohydrate and intermediary metabolism in the liver and muscle	127
5.11 List of primers used for qRT-PCR of genes related to epigenetic modification-related enzymes expressed in liver and muscle tissues.....	128
