

LIST OF FIGURES

| Figure | Page |
|---|------|
| 2.1 Tilapia (<i>Oreochromis niloticus</i>)..... | 9 |
| 2.2 The process of glycolysis and gluconeogenesis..... | 13 |
| 2.3 The process of lipogenesis and amino acid catabolism | 13 |
| 2.4 The principle of nutritional programming | 16 |
| 2.5 The long-term effect of early high-carbohydrate treatment on hepatic gene expression in adult zebrafish F0 (1-week HC challenge)..... | 18 |
| 2.6 The role of epigenetic modifications in glucose metabolism | 21 |
| 2.7 The role of epigenetic modifications in lipid metabolism | 22 |
| 2.8 Effect of parental LP/HC diet on fry metabolic rates..... | 23 |
| 2.9 Effect of parental LP/HC diet on fry DNA methylation | 24 |
| 2.10 The pck1 expression levels in FF, YE, and the control group in F0 and F1 | 24 |
| 2.11 Gene-specific DNA methylation in the promoter region of pck1 | 25 |
| 3.1 Experimental plan for nutritional programming involving dietary high carbohydrate (HC) stimuli in broodstock and their long-term impacts on carbohydrate (CHO) metabolism in juvenile offspring..... | 49 |
| 4.1 Experimental plan for nutritional programming involving dietary high carbohydrate (HC) stimuli in broodstock and their long-term impacts on carbohydrate (CHO) metabolism in adult offspring. | 79 |
| 4.2 Growth of experimental offspring fish from Nile tilapia broodstock fed LC/HP and HC/LP diets for 14 days..... | 80 |
| 5.1 Experimental plan for nutritional programming involving dietary high carbohydrate (HC) stimuli in broodstock and their long-term impacts on carbohydrate (CHO) metabolism in harvestable adult offspring..... | 114 |
| 5.2 Growth of experimental offspring fish from Nile tilapia broodstock fed LC/HP and HC/LP diets for 14 days..... | 115 |
| 6.1 Conclusion map..... | 135 |
