

ACKNOWLEDGEMENTS

This thesis is the result of a long journey that has been made possible by the support and encouragement of many people. I would like to take this opportunity to express my heartfelt gratitude to all those who have contributed to this work. First, I would like to express my sincere gratitude to my advisor, Asst. Prof. Dr. Ittipon Fongkaew, for his invaluable guidance, support, and encouragement throughout my research journey. His expertise and insights have been instrumental in shaping this thesis.

Now I would like to devote a paragraph to my family, who always supported me in every step of my life. I am grateful for their love, encouragement, and sacrifices that have made it possible for me to pursue my academic dreams. Although, I feel sorry for not being able to spend enough time with them, I am thankful for their understanding and patience. I hope this thesis will make them proud and serve as a testament to their unwavering support.

I would like to express my deepest appreciation to my girlfriend, Suchunya Wongprasod for support and encouragement throughout my academic journey. You always help me to step over the challenges and difficulties I faced during my study. Your love and understanding have been a source of strength and motivation for me. I am grateful for your patience and support, especially during the times when I was overwhelmed with work.

Lastly, I would like to acknowledge the Development and Promotion of Science and Technology Talents Project (DPST) for providing me with the scholarship that has made this research possible. Their support has been invaluable in enabling me to focus on my studies and research without financial constraints. Moreover, you also help me to meet many new journeys and experiences that I would not have had otherwise. I am grateful for the opportunities that this scholarship has provided me, and I hope to continue to contribute to the field of science and technology in the future.
