

ACKNOWLEDGEMENTS

I would like to express my very great appreciation to my advisor, Asst. Prof. Dr. Sunanta Tongta for his valuable and constructive suggestions during the planning and development of this research work. Her willingness to give her time so generously has been very much appreciated. I would like to thank Assoc. Prof. Dr. Siwat Thaiudom for good suggestions on dynamic rheology analysis. His assistance and advice is greatly appreciated.

I am also thankful for faculty members at School of food technology, Suranaree University of Technology for their scientific discussion and instrumental support. I would like to thank Synchrotron Light Research Institute, Nakhon Ratchasima, Thailand for supporting the laboratory facilities. Financial support from the Agricultural Research Development Agency (ARDA, 2021) is also greatly appreciated.

Thanks to all members of Assoc. Prof. Dr. Sunanta Tongta and my friends at Suranaree University of Technology, for their friendship, helps, supports and encouragement.

Finally, I most gratefully acknowledge my parents for all of the love, dedication, encouragement and supporting me spiritually throughout my life. and motivation throughout writing this thesis.
