Contents

Preface	ix
Introduction	1
Chapter 1. Interpolation by Polynomials and Lagrange Splines	7
1.1 Polynomial Interpolation Problem	7
1.2 Lagrange Interpolation Formula	8
1.3 Newton Interpolating Polynomial	11
1.4 Generalized Horner's Rule	14
1.5 Convergence of the Interpolating Polynomials	18
1.6 Piecewise Linear Interpolation	20
1.7 Interpolation by Cubic Lagrange Splines	23
1.8 Local Approximation by Cubic Lagrange Splines	26
1.9 Local Approximation by Cubic B-Splines	28
1.10 Interpolation by Quadratic Lagrange Splines	30
1.11 Local Approximation by Quadratic Lagrange Splines	32
1.12 Problems	33
Chapter 2. Cubic Spline Interpolation	37
2.1 Cubic Interpolating Splines	37
2.2 Defining Relations for Cubic Interpolating Splines	39
2.3 Endpoint Constraints and Systems of Linear Equations	40
2.4 Diagonally Dominant Matrices. Existence and Uniqueness of the Solution	42
2.5 Gaussian Elimination for Tridiagonal Systems	44
2.6 Correctness and Stability of Gaussian Elimination	45
2.7 Front Gaussian Elimination	46
2.8 Example of a Cubic Interpolating Spline	48
2.9 Periodic Gaussian Elimination	50
2.10 Correctness and Stability of Periodic Gaussian Elimination	53
2.11 First Derivative Algorithm	54
2.12 An Example of First Derivative Algorithm	56
2.13 Problems	57

Chapter 3. Algorithms for Computing 1-D and 2-D**Polynomial Splines 61****3.1 Definition of Splines. The Space of Splines 61****3.2 Basis Splines with Finite Support 64****xi 3.3 Normalized Basis Splines. Representation of Polynomials
and Truncated Power Functions 71****1 3.4 Computing Splines and Their Derivatives 77****3 3.5 Cardinal Splines. Lagrange and Hermite Interpolation
Formulae for Splines 83****3.6 Extremal Properties of Even Order Polynomial Splines 88****3.7 Spline Functions of Two Variables on a Rectangular Mesh 91****Chapter 4. Methods of Monotone and Convex Spline****Interpolation 97****4.1 Introduction 97****4.2 Monotonicity Preserving Interpolation by C^1 Cubic Splines 102****4.3 Monotone and Convex Interpolation by C^2 Cubic Splines 107****4.3.1 Monotone Matrices. Lemma on Tridiagonal System 107****4.3.2 Convex Cubic Splines 109****4.3.3 Monotone Cubic Splines 111****4.4 Monotone and Convex Interpolation by Generalized Tension Splines 113****4.4.1 Generalized Tension Splines. Conditions of Existence
and Uniqueness 113****4.4.2 Convex Interpolation by Generalized Tension Splines 117****4.4.3 Monotone Interpolation by Generalized Tension Splines 119****4.4.4 Necessary and Sufficient Conditions for Monotonicity
of Generalized Tension Splines 121****4.4.5 Choice of Defining Functions and Tension Parameters 123****4.5 Historical Notes 126****Chapter 5. Methods of Shape-Preserving Spline Interpolation. 127****5.1 A Class of Shape-Preserving Functions 127****5.2 Classification of the Data 128****5.3 Solution of the Hermite Interpolation Problem with Constraints 134****5.4 Numerical Algorithm for Constructing a Shape-Preserving Function 141****5.5 Software Implementation of the Algorithm 146****5.6 Graphical Examples 149**

Chapter 6. Local Bases for Generalized Tension Splines	153
6.1 Generalized Tension Splines. Conditions of Existence and Uniqueness	153
6.2 Construction of GB-Splines	157
6.3 A Second Method for Constructing GB-Splines	159
6.4 Definition of GB-Splines through Differences	162
6.5 Recurrence Formulae for GB-Splines	163
6.6 Properties of GB-Splines	164
6.7 Series of GB-Splines	168
6.8 Transformations between Spline Representations	174
6.9 Formulae for Local Approximation by GB-Splines	176
6.10 Examples of GB-Splines	178
6.10.1 Parabolic GB-Splines	180
Chapter 7. GB-Splines of Arbitrary Order	183
7.1 GB-Splines of Arbitrary Order	183
7.2 Recursive Algorithm for the Calculation of GB-Splines	186
7.3 Another Representation for GB-Splines	194
7.4 Properties of GB-Splines	196
7.5 Series of GB-Splines	201
7.6 Invariance of Generalized Splines with Respect to Affine Transformations	206
7.7 Local Approximation by GB-Splines	208
7.8 Examples	211
Chapter 8. Methods of Shape Preserving Local Spline Approximation	213
8.1 The Problem of Shape Preserving Approximation	214
8.2 A One-Point Algorithm for Shape Preserving Approximation	216
8.3 A Three-Point Algorithm for Shape Preserving Approximation	221
8.4 Shape Preserving Surface Approximation	225
8.5 Graphical Examples	228
Chapter 9. Difference Method for Construction Hyperbolic Tension Splines	237
9.1 Finite Difference Approximation	238
9.2 System Splitting and Mesh Solution Extension	239
9.3 Error Estimates	242
9.4 Discrete Hyperbolic Tension B-Splines	245
9.4.1 Construction of Discrete HB-Splines	246

9.4.2 Recurrence Formulae for Discrete HB-Splines	248
9.4.3 Formulae for Local Approximation by Discrete HB-Splines	251
9.5 Computational Aspects	253
9.5.1 The Pentadiagonal System	254
9.5.2 The Uniform Case	255
9.5.3 System Splitting	257
9.6 Graphical Examples	259
Chapter 10. Discrete Generalized Tension Splines	263
10.1 Discrete Generalized Splines. Conditions of Existence and Uniqueness	263
10.2 Construction of Basis Splines	268
10.3 Properties of Discrete GB-Splines	271
10.4 Definition of Discrete GB-Splines through Differences	273
10.5 Transformations between Spline Representations	274
10.6 Local Approximation by Discrete GB-Spline	275
10.7 The Case of Discrete Cubic Splines	277
10.7.1 Piecewise Cubic Lagrange Polynomial	279
10.8 Recurrence Formulae for Discrete GB-Splines	279
10.8.1 The Uniform Case	281
10.9 Series of Discrete GB-Splines	283
10.10 Examples of Defining Functions	288
10.11 Historical Notes	289
Chapter 11. Methods of Shape Preserving Parametrization	291
11.1 General Consideration	291
11.2 Affine Invariance of Polynomials and Splines	293
11.3 Monotonicity Preserving Parametrization	295
11.4 Parametrization for Cubic Splines	298
11.5 Parametrization under Surface Construction	301
11.6 Graphical Examples	303
References	309
Appendix A. Example: Reconstruction of a Ship Surface	323
Appendix B. Computer Programs for Shape Preserving Surface Approximation	329
Index	333
