ABSTRACT IN THAI	I
ABSTRACT IN ENGLISH	III
ACKNOWLEDGEMENT	V
CONTENTS.....	VII
LIST OF TABLES.....	XIV
LIST OF FIGURES.....	XVII
LIST OF ABBREVIATIONS.....	XIX
CHAPTER	
I INTRODUCTION	1
1.1 Introduction	1
1.2 Research objectives	2
1.3 Research hypotheses.....	3
1.4 Scope of the study	3
1.5 Expected benefits	3
1.6 References	4
II LITERATURE REVIEW	6
2.1 Value addition to chicken meat through n-3 PUFAs supplementation	6
2.2 Accumulation of n-3 PUFAs in chicken tissue	7
2.3 Application of lipid nanotechnology for functional meat production in Korat chickens	7
2.4 Lipid based nanocarriers become attractive formulation in livestock	8
2.4.1 lipid based nanocarriers	8
2.4.2 Difference between SLN and NLCs	10

CONTENTS (Continued)

	Page
2.4.3 Encapsulated for increased utilization of bioactive compound and other substances.....	11
2.5 Lipid nanocarriers for n-3 PUFAs enrichment in functional meat from Korat chickens	13
2.5.1 Lipid digestion and absorption in chicken	13
2.5.2 Cargo transported with lipid based nanocarriers through gastrointestinal tract.....	14
2.5.2.1 Lipid based nanocarriers stability in GI tract	14
2.5.2.2 Permeability of lipid based nanocarriers in enterocyte	20
2.5.3 Transportation of lipid based nanocarriers to target organ	24
2.6 Understanding transcytosis mechanisms in nanoparticle transfer and intracellular vesicle dynamics	27
2.6.1 Transcytosis pathways in nanoparticle delivery	27
2.6.2 Protein involved nanoparticle adsorption by enterocyte cell	29
2.7 References	31
III ENHANCEMENT OF n-3 PUFAS UTILIZATION FOR FUNCTIONAL MEAT PRODUCTION IN SLOW-GROWING KORAT CHICKEN: EVALUATION OF CHARACTERISTICS OF GLUCOSE TRANSPORTER-TARGETED LIPID NANOPARTICLES	41
3.1 Abstract	41
3.2 Introduction	42
3.3 Objective	43
3.4 Materials and methods	43
3.4.1 Experimental design for in vitro study.....	43
3.4.2 Lipid nanoparticles synthesis.....	44

CONTENTS (Continued)

	Page
3.4.3 Physicochemical characteristic analysis	44
3.4.4 Thermal and chemical properties of lipid nanoparticles	45
3.4.4.1 Differential scanning calorimetry (DSC)	45
3.4.4.2 Fourier-transformed infrared spectroscopy (FTIR).....	46
3.4.5 In vitro storage stability	46
3.4.6 Experimental design for in vivo study	47
3.4.7 <i>In vivo</i> imaging of tissue biodistribution	48
3.4.8 Fatty acid composition	48
3.4.9 Statistical analysis	49
3.5 Results	49
3.5.1 Physicochemical characteristics of lipid-based nanoparticles containing n-3 PUFA oil	49
3.5.2 Thermal and chemical properties of lipid-based nanoparticles	50
3.5.3 In vitro storage stability of n-3 PUFA lipid-based nanoparticles	52
3.5.3.1 Particle size stability.....	52
3.5.3.2 Oxidative stability evaluated with peroxidative value.....	53
3.5.3.3 Oxidative stability evaluated with TBARS value.....	54
3.5.4 Transfer of lipid nanoparticles to the target organ.....	55
3.5.5 Fatty acid composition of breast meat of Korat chicken	56
3.5.6 Coefficient of efficacy of lipid-nanoparticles	58
3.6 Discussion.....	59
3.6.1 Effect of n-3 PUFA source on the physicochemical characteristics of lipid-based nanoparticles	59

CONTENTS (Continued)

	Page
3.6.2 Effect of temperature and storage duration on the physicochemical characteristics of lipid-based nanoparticles	60
3.6.3 Effect of targeting process on the physicochemical characteristics of lipid nanoparticles	61
3.6.4 Effect of targeting process on the efficiency of dietary n-3 PUFA deposition in muscles.....	65
3.7 Conclusions	67
3.8 References	67
IV OPTIMIZING n-3 PUFA DIETARY ENRICHMENT IN SLOW-GROWING KORAT CHICKENS USING LIPID-BASED NANOPARTICLES: EFFECTS ON GROWTH PERFORMANCE, CARCASS TRAITS, MEAT QUALITY, MEAT FATTY ACID COMPOSITION, AND BLOOD BIOCHEMICAL PARAMETERS	77
4.1 Abstract	77
4.2 Introduction	78
4.3 Materials and methods	80
4.3.1 Preparation of targeted lipid nanoparticles.....	80
4.3.2 Ethics statement	80
4.3.3 Birds and housing.....	80
4.3.4 Experimental design	80
4.3.5 Data and sample collection	81
4.3.5.1 Growth performance	81
4.3.5.2 Carcass and meat quality.....	81
4.3.5.3 Meat quality.....	81
4.3.5.4 Fatty acid composition	82
4.3.6 Blood parameters	85

CONTENTS (Continued)

	Page
4.3.6.1 Blood sample collection.....	85
4.3.7 Statistical analysis	86
4.4 Results	87
4.4.1 Growth performance	87
4.4.2 Carcass composition.....	87
4.4.3 Meat quality	87
4.4.4 Lipid content and fatty acid composition	89
4.4.5 Hematology measurements	92
4.4.6 Plasma biochemistry	93
4.5 Discussion.....	95
4.5.1 The enrichment n-3 PUFA in slow-growing chicken meat with targeting lipid nanoparticle	95
4.5.2 The evaluation of the safety of nanocarrier used in Korat chicken	97
4.5.2.1 Targeted lipid nanoparticles have no effect on growth performance and production performance except the visceral organs weight	97
4.5.2.2 Targeted lipid nanoparticles effect on hematological and plasma biochemical parameters	100
4.6 Conclusions	103
4.7 References	103
V DIFFERENTIAL MOLECULAR RESPONSES AND FATTY ACID METABOLISM INDUCED BY UNENCAPSULATED TUNA OIL AND GLUCOSE TRANSPORTER-TARGETED NANOPARTICLES	112
5.1 Abstract	112
5.2 Introduction	113

CONTENTS (Continued)

	Page
5.3 Materials and methods	114
5.3.1 Ethics statement	114
5.3.2 Birds and housing management	114
5.3.3 Experiment chicken and tissue collection.....	114
5.3.4 Samples preparation for proteomic analysis	115
5.3.5 SDS-PAGE separation of proteins.....	115
5.3.6 SDS-PAGE without fractionation.....	116
5.3.7 in-gel digestion	116
5.3.8 Mass spectrometry LC1D-nanoESI-LTQ-Orbitrap analysis.....	116
5.3.9 Bioinformatics analysis of differential abundant proteins (DAPs).....	118
5.4 Results and discussions.....	118
5.4.1 Principal component analysis of fatty acid profiles in Korat chicken received tuna oil in lipid nanoparticles	119
5.4.2 Differential expression proteins of thigh muscle.....	121
5.4.2.1 Principal component analysis (PCA).....	121
5.4.2.2 Volcano plots, Heatmap and Venn diagram	122
5.4.3 Molecular responses to dietary interventions	122
5.4.4 Functional grouping of molecular responses to dietary interventions using GO terms and KEGG pathways clustering	126
5.4.5 Interaction network of DAPs relates to biological function in each comparison	133
5.4.6 n-3 PUFAs encapsulated in lipid nanoparticles induce a metabolic shift in skeletal muscle, favoring aerobic metabolism	143

CONTENTS (Continued)

	Page
5.4.7 Lipid nanoparticle supplementation drives amino acid metabolism toward enhanced mitochondrial efficiency	144
5.4.8 Impact of lipid nanoparticles on cellular antioxidant and detoxification mechanisms	145
5.4.8.1 Cellular antioxidant	145
5.4.8.2 Detoxification mechanisms	147
5.4.9 The DAPs in lipid nanoparticles: preventing phospholipid damage and supporting trafficking digestion	149
5.4.10 Lipid nanoparticles promote enhanced muscle performance by prioritizing sarcomeric and calcium dynamics	152
5.4.11 Cellular stability and immune response modulation by tuna oil loaded in lipid nanoparticles	154
5.5 Conclusion	155
5.6 References	156
VI OVERALL CONCLUSION AND PERSPECTIVE.....	168
6.1 Overall conclusion	168
6.2 Perspective	169
APPENDIX.....	170
BIOGRAPHY.....	172
