

LIST OF FIGURES

Figure	Page
2.1 Nanoparticle wrapping at the surface membrane.....	28
2.2 Diagram representation of the transcytosis pathways of glycosylation in barrier cells.....	29
3.1 lipid nanoparticle preparation	44
3.2 Differential scanning calorimetry (DSC) thermographs of nanomaterial including glyceryl monostearate (GMS), and lipid-based nanoparticles with tuna oil (TO) or algal oil (AO) and targeted (TNPs) or not (NPs).....	51
3.3 (a) FTIR spectra of nanomaterial, physical mixture (PM) and lipid-based nanoparticles (NPs and TNPs) and (b) chemical structure of nanomaterials.....	52
3.4 Nile red distribution in Pectoralis major muscle of chicken imaging by IVIS of treatment group including non-targeted lipid nanoparticles (NPs) and targeted lipid nanoparticles (TNPs) at 2, 4, 8, 12 and 24 h after oral administration.....	56
5.1 Principal component analysis (PCA) of fatty acid profiles from experimental groups	120
5.2 Principal Component Analysis (PCA) plots (A, B, C and D), illustrating the separation of dietary treatment groups based on differential protein expression profiles including NC, PC (3% tuna oil) and TNP (3% tuna oil loaded in lipid nanoparticles). Volcano plots (E, F, and G) and Vann diagram (H) illustrating of the three pairwise groups.....	124
5.3 Heatmap illustrations of differential protein expression profiles Across different samples including A, Negative control and Positive control (NC vs PC); B, Negative control and C, targeted-lipid nanoparticles (NC vs TNP), and Positive control and targeted-lipid nanoparticles (PC vs TNP)	125

LIST OF FIGURES (Continued)

	Page
5.4 Comparative analysis of GO enrichment terms and KEGG pathway involvement in dietary treatments NC vs PC (A) and NC vs TNP (B)	128
5.5 Protein-protein interaction networks in pairwise dietary comparisons, NC vs PC (A) and NC vs TNP (B).....	135
