

ACKNOWLEDGEMENT

The completion of this doctoral dissertation has been a long and transformative journey. Throughout this process, I have never been alone. The support, encouragement, and generosity of many individuals have made it possible for me to reach this point. It is with deep gratitude that I express my heartfelt appreciation to all those who have guided and supported me along the way.

First and foremost, I would like to express my profound gratitude to my advisor, Prof. Dr. Surintorn Boonanuntanasarn. Your rigorous academic standards, profound knowledge, and unwavering guidance have shaped not only my research but also my personal growth. Thank you for illuminating my path when I felt uncertain, for encouraging me when challenges arose, and for fostering an environment where I could develop as both a researcher and an individual. Your mentorship has been invaluable.

My sincere appreciation also extends to my co-advisor, Asst. Prof. Dr. Satoshi Kubota, for his insightful advice, constant support, and expert guidance throughout my research. His deep understanding of molecular technology, keen academic perspectives, and meticulous attention to detail have greatly enriched the quality of my work.

I would also like to thank the members of my thesis committee—Prof. Dr. Uthairat Na-Nakorn, Prof. Dr. Pongchan Na-Lampang, Assoc. Prof. Dr. Amonrat Molee, Asst. Prof. Dr. Samorn Ponchunchoovong, Assoc. Prof. Dr. Pakanit Kupittayanant, and Assoc. Prof. Dr. Monwadee Wonglapsuwan—for their constructive comments and valuable suggestions, which have been essential in refining this dissertation.

My heartfelt thanks go to all members of the Surintorn Boonanuntanasarn Laboratory, with whom I have shared countless discussions, experiments, challenges, and joyful moments. Your companionship has brought warmth and motivation to my doctoral journey. In particular, I would like to express special thanks to Sirijanya Thongchaitriwat and Khanakorn Phonsiri, whose guidance in experimental techniques

and data analysis was instrumental in completing the core components of this research.

I am deeply grateful to my family—especially my parents and my partner—for their unconditional love, patience, and understanding. Your constant support has been my greatest source of strength. During moments of exhaustion and anxiety, your encouragement lifted me and allowed me to persevere. This achievement belongs to you as much as it belongs to me.

To my friends, thank you for bringing balance and joy into my life. Whether through late-night conversations or simple gatherings, your presence has offered comfort and happiness amid the intensity of academic work.

I also wish to acknowledge Suranaree University of Technology, the School of Animal Technology and Innovation, the University Farm, and the Center of Scientific and Technological Equipment for providing excellent resources, facilities, and academic support. My sincere thanks to all the faculty members and staff who have assisted me throughout my studies and contributed to an inspiring research environment.

This doctoral journey has been both challenging and enriching. It has taught me perseverance, gratitude, and resilience. Though the road ahead is long, I move forward with confidence, strengthened by the lessons learned and the support I have received.

To everyone who has helped me along this path—thank you.

Minghua Zhang
